

Caterfy

Remaining Issues & Go-to-Market Plan

Updated after the July 2026 implementation pass. Everything the original audit found that could be fixed in code has been built and verified against a passing production build — this document now covers only what is still outstanding: the external setup only you can do, the decisions only you can make, the product roadmap, and the marketing plan to execute.

Where things stand — executive summary

The July 2026 implementation pass closed **every code-fixable finding** from the original audit: SEO foundations, the landing-page restructure, the password-reset flow, the cookie banner, the fictional-testimonial removal, the directory fixes, the share/QR growth loop, page-view analytics, attribution, and the full lifecycle email system with its daily cron. The app builds clean (51 routes).

What remains falls into exactly three buckets:

BUCKET	WHAT'S IN IT	WHO / WHEN
BLOCKERS	External setup only you can do: domain, Resend verification + SMTP, Netlify env vars, migration 012, Stripe live mode, Search Console. About one focused day, mostly waiting on DNS. Nothing should be promoted until these are done — emails still don't deliver to real users.	You · this week
DECISIONS	Legal entity wording, VAT line, a real testimonial (slot is ready and empty), the 3-minute tutorial video, sales copy sign-offs.	You · low urgency except testimonial
ROADMAP	The five known-pending product items (live preview, inline checkout, bank-details relocation, expanded admin, order↔invoice indicator) plus referral programme and the remaining 18 guides. None block launch.	Post-launch queue

THE CRITICAL PATH, IN ORDER

1. Buy/point the domain → 2. Verify it in Resend + set DNS records + Supabase SMTP → 3. Set the Netlify env vars & run migration 012 → 4. Send yourself a test order end-to-end → 5. Start the founding-member outreach (Section 07). Everything else can happen in parallel or later.

What was fixed in the implementation pass (context)

Recorded here so this document stands alone; the detail lives in CLAUDE.md ("Growth/SEO/lifecycle pass"). All of the following are **done, built and verified**:

- **SEO & sharing:** caterer-first metadata, branded OG image + favicon/app icons, per-caterer OG images, sitemap.xml, robots.txt, JSON-LD on every surface (Organization, FoodEstablishment + review stars, FAQPage, ItemList/Breadcrumb, Article), canonical URLs, 404s for unknown directory slugs, internal-link blocks that de-orphan the location/cuisine pages.
- **Landing page:** 11 cards → 4 job clusters; category-word trust strip (no invented names); fictional testimonial removed and replaced with a 5-question FAQ accordion; founder note added; "No card required" beside every CTA; pricing comparison line.
- **Funnel:** forgot/reset-password flow; verify-email resend button + spam hint + address display; signup slug preview, password toggle and reassurance copy; soft-expiry "taking a break" page for lapsed sites (with noindex) instead of a 404; trialling accounts past their end date now soft-expire too.
- **Growth loops:** publish-&-share dialog (copy link / WhatsApp / QR download / printable A5 "Scan to order" poster / Instagram-bio tip), auto-opens at first publish; "Share your link" checklist step; powered-by footers now env-based with UTM tracking and a stronger tagline; first-order celebration email.
- **Measurement:** per-caterer page-view counter (shown on dashboard + analytics); GA4 events for sign-up, publish, share, order, subscribe; UTM first-touch attribution stored on every new account; consent-gated GA behind a cookie banner (PECR-compliant).
- **Directory:** trialling caterers now listed (promise mismatch resolved); real review stars on cards; pagination; empty states converted to "Get listed free" caterer-acquisition CTAs.
- **Email system:** every template restyled to the brand with a support reply-to; welcome-email trial copy corrected; trial day-1/7/12/14 sequence, order reminder (24h), auto-cancel (48h), review request (day after event) and monthly summary emails all implemented behind an idempotent daily cron with a Netlify schedule.
- **Content hub:** /guides live with the first two articles (business-formation and take-orders-online), Article schema, sitemap + footer links.
- **Misc:** dashboard stat bugs fixed, tutorial-video placeholder removed, dashboard/analytics theme sweep, branded 404, support email surfaced in footer/FAQ/sidebar/emails.

Remaining launch blockers — external setup only you can do

These cannot be done from the codebase. Until items 1–4 are complete, **emails do not deliver to anyone except the Resend account owner**, so real signups die at the verification step. Work top to bottom:

#	TASK	DETAIL
1	Buy & point the production domain	caterfy.com (or .co.uk fallback). Add it as the primary domain in Netlify. Every share, backlink and powered-by click currently accrues to caterfy.netlify.app — equity on a domain you don't own.
2	Verify the domain in Resend	Resend → Domains → add domain → create the SPF + DKIM DNS records it gives you (+ a DMARC record, <code>p=none</code> to start). Then set <code>RESEND_FROM_DOMAIN=yourdomain.com</code> in Netlify. Until this: sandbox mode, owner-only delivery.
3	Enable Supabase custom SMTP	Project Settings → Auth → SMTP, sender e.g. <code>hello@yourdomain.com</code> (via Resend SMTP creds). Fixes the ~few-emails-per-hour cap on verification emails that would silently kill a launch spike.
4	Set the new Netlify env vars	<code>NEXT_PUBLIC_APP_URL</code> → the real domain (powers canonical URLs, sitemap, powered-by links, all email links) · <code>CRON_SECRET</code> → any long random string (enables the daily lifecycle cron) · <code>NEXT_PUBLIC_SUPPORT_EMAIL</code> → your support address (defaults to hello@caterfy.com) · confirm <code>NEXT_PUBLIC_GA_MEASUREMENT_ID</code> is set if you want analytics.
5	Run migration 012	<code>supabase/migrations/012_growth_and_lifecycle.sql</code> in the Supabase SQL editor. Enables: page-view counts, share-checklist tracking, signup attribution, and the cron's idempotency table. The code degrades gracefully until it runs, but the growth features are dormant.
6	Verify the scheduled cron fired	After the next deploy, Netlify → Functions → <code>lifecycle-cron</code> should show a 09:00 UTC daily schedule. Trigger it once manually (<code>curl -H "x-cron-key: \$CRON_SECRET" https://yourdomain/api/cron/daily</code>) and check the JSON response.
7	End-to-end email test	Sign up with a non-owner Gmail, Outlook and iCloud address; place a test order; confirm verification, confirmation and acceptance emails land in the inbox (not spam).
8	Stripe live mode	Swap test keys for live keys in Netlify, re-point the webhook endpoint to the live domain, activate Connect for live mode, and run one real £1 self-order + refund.
9	Google Search Console + Bing	Verify the domain, submit <code>/sitemap.xml</code> , and check the location/cuisine pages get crawled. Free, ten minutes, starts the SEO clock.

Local note: `.env.local` currently holds placeholder Supabase values — fine for building, but local dev against the real database needs the real keys.

Remaining decisions & content only you can provide

ITEM	CURRENT STATE	WHAT'S NEEDED FROM YOU
Legal identity in footer	Footer shows "Caterfy" + the support email. UK e-commerce regulations expect the trading/legal name and contact details of the service provider.	Confirm the legal/trading name (and registered address if a company); one-line footer edit once known.
VAT wording on pricing	"£10/month" shown bare.	Confirm VAT registration status → add "incl. VAT" or "no VAT charged" to the pricing card.
Real testimonial	The fictional one is gone; the landing page runs FAQ + founder note in its place, which is safe and honest. A real-quote slot is designed and waiting.	One honest quote + business name from a founding member (Section 07 makes this an explicit deliverable — expect it within 4–6 weeks).
Tutorial video	The "coming soon" placeholder was removed from the dashboard.	A 3-minute screen-recorded walkthrough (Loom is fine). Doubles as an outreach asset. Re-add the dashboard card when it exists.
Founder note copy	A drafted founder note now ships on the landing page ("Caterfy exists because too many brilliant caterers run their whole business out of a notes app...").	Read it and make it yours — a personal detail or name/signature would strengthen it. Edit in <code>app/(marketing)/page.tsx</code> .

Product roadmap — known-pending items (unchanged)

These pre-date the audit, remain valid, and none block launch. Suggested order reflects impact on activation and conversion:

#	ITEM	WHY IT MATTERS
1	Live preview in the site editor	The biggest UX gap: changes only show after Save + reload. Seeing edits instantly is the "aha" of any site builder — highest-impact activation improvement available. Largest build.
2	Inline card checkout (Stripe Embedded Checkout / Payment Element)	Off-site redirects cost some completion on the customer side.
3	Move bank-transfer details editor from Settings → Payments tab to the Payments page	Tester-requested ergonomics.
4	Expanded admin actions at /mistuzzo (edit/suspend caterers, view orders, settings)	Operational tooling for when support requests start arriving.
5	Order ↔ invoice paid cross-indicator	Invoice paid state isn't surfaced on the related order row.
6	Referral programme ("give a month, get a month")	Build once real billing is live and there are ≥20 paying caterers to refer.
7	Remaining 18 guides (Appendix B)	Two are live; publish two per month per the content plan.
8	Custom domains for caterers	Already on the public roadmap (FAQ mentions it); a genuine upsell/retention feature later.

The marketing plan — strategy & principles

6.1 The economics that shape everything

£10/mo

REVENUE PER CUSTOMER

< £30

MAX ACCEPTABLE CAC (3-MONTH PAYBACK)

£120–240

LTV AT 12–24 MONTH RETENTION

~£0

BUDGET REQUIRED FOR PHASES 1–3

A £10/month product cannot buy customers with cold paid advertising at typical UK SaaS CPCs — acquisition must be organic, product-led, or extremely high-intent. That constraint dictates a plan made entirely of channels whose worst case is "slow", not "money lost".

6.2 Why this plan has a very low likelihood of failure

- **Phase 1 (founder outreach) cannot really fail** — worst case, 100 conversations with target customers produce product feedback instead of signups. Every successful marketplace (Airbnb, Etsy, Bark) seeded supply by hand.
- **Phase 2 (local/programmatic SEO) is now structural** — the engine is fully built and wired (sitemap, schema, internal links, 404 hygiene); it just needs the domain and Search Console registration, then it compounds with every caterer who joins.
- **Phase 3 (loops & partnerships) rides existing behaviour** — caterers already share links everywhere; the share dialog, QR poster and UTM-tagged powered-by footers make every shared link a tracked acquisition surface.
- **Paid money only moves after the funnel proves itself** — Phase 4 spends £150–300/month on exact-match, high-intent search with explicit kill criteria.

6.3 Positioning one-liner for all channels

USE EVERYWHERE — BIOS, LISTINGS, ADS, OUTREACH

Caterfy — the £10/month website that takes your catering orders for you. Orders, quotes, invoices and payments in one page. No commission, no card needed to try it.

6.4 The 90-day map at a glance

PHASE	WHEN	WHAT	SUCCESS LOOKS LIKE
0 — Setup MOSTLY DONE	This week	Only the Section 03 external items remain (domain, email, env, migration, Stripe live)	A stranger can sign up, verify, publish and share a great-looking link
1 — Seed	Weeks 1–6	Founding members: 100–200 personal outreaches → 15–25 free founding caterers across 3–4 cities	Directory credible; 3+ real testimonials; 10+ activated sites

2 — Foundations	Months 1–3	Search Console live, launch listings (Product Hunt, Capterra et al.), 2 guides/month continue	Impressions growing weekly; first organic signups
3 — Loops	Months 2–6	FB-group presence, 2–3 partnerships, referral offer once billing is live	≥30% of new signups from referral/organic/powered-by
4 — Fuel	Month 3+	£150–300/mo exact-match Google Ads + one Meta creative test, strict kill criteria	Blended CAC < £30 or spend stopped

Phase 1 (weeks 1–6): founding members — seed the supply side

7.1 The play

Personally recruit **15–25 "founding member" caterers**, concentrated in 3–4 cities (concentration makes those cities' directory pages real). The offer:

THE FOUNDING OFFER

Free for 6 months (then £10/month, cancel anytime) in exchange for: (1) actually setting up and using the site, (2) one 20-minute feedback call or voice-note exchange, (3) permission to feature their site and — if they're happy — a quotable testimonial with their real business name.

This one programme simultaneously solves: the empty directory, the missing-testimonial slot, product feedback, first case studies, and the seed of every loop (their shared links carry the UTM-tracked "Powered by Caterfy" footer). Cost: your time plus deferred revenue of ~£60/caterer.

7.2 Where to find them (all free, all high-density)

- **Instagram:** #ukcaterer #cateringuk #grazingtable #buffetcatering #eventcatereruk + "{city} caterer" searches. Prioritise accounts with "DM to book!" in bio and no ordering link — they feel the pain today.
- **Facebook groups:** UK catering & home-food-business groups (10–50k members each). Note members asking website/order-management questions — warm beats cold.
- **FSA hygiene register:** public data listing every registered food business by locality — caterers with a 5-rating and no web presence are the perfect profile.
- **Marketplace listings:** caterers on Add to Event / Bark are provably willing to pay for leads — "own your direct channel for £10 flat" is a strong pitch.
- **Physical:** a Saturday walking a farmers' market with a QR card is the highest-conversion channel per hour in this plan.

7.3 Execution discipline

- Volume: 100–200 personalised contacts over 4–6 weeks (~8/day). Expect 30–40% response, 10–25% take-up → 15–25 members. Templates: Appendix A.
- Personalise the first line with something true about *their food*. Never mass-DM.
- **White-glove onboarding:** offer to set their site up *for* them from their Instagram content in 30 minutes on a call. Do-it-for-you converts this audience dramatically better, and watching 15 people onboard is a usability study you can't buy.
- Track in a sheet: name, city, source, stage, notes. Ask every joiner for two caterer friends.
- Deliverables out of Phase 1: ≥3 real testimonials (fills the empty landing slot), ≥2 mini case studies, directory density in 3–4 cities.

Phase 2 (months 1–3): SEO engine & launch listings

8.1 Switch on what's already built

- Register the domain in Google Search Console + Bing; submit the sitemap; monitor "{cuisine} caterer {town}" impressions weekly. The pages, schema, internal links and 404 hygiene are all live — this is now purely a registration + patience exercise.
- Seed reference data deliberately: locations covering the founding cities plus ~30–50 realistic UK towns; cuisine slugs matching how people actually search ("hog roast", "afternoon tea", "halal catering").
- Every new caterer strengthens the machine — *supply growth is SEO growth*. Their pages already ship LocalBusiness schema with review stars.

8.2 Launch listings (one-time, free, permanent backlinks)

WHERE	NOTES
Product Hunt	One coordinated launch day once founding members exist (their comments matter). Outcome: a traffic burst + permanent backlinks. Don't over-invest — one good day.
Capterra / GetApp / Software Advice	Free listings in "Catering software" — real search volume, weak competition. Ask founding members for reviews there.
AlternativeTo, SaaSHub, BetaList, Unneed, IndieHackers	An afternoon of form-filling; each is a permanent backlink and a trickle of exactly-right visitors.
UK small-business tool roundups	Email the authors of "best website builders for food businesses" articles. One inclusion outranks months of posting.

8.3 Content cadence

The hub is live at /guides with two articles. Continue at **two per month** from Appendix B, caterer-side first — they capture people at business-formation, the moment of highest tool adoption. Every article ends with the standard CTA and internally links directory pages.

Phase 3 (months 2–6): communities, partnerships & loops

9.1 Product-led loops (built — now feed them)

- **Share moment & QR kit are live.** Watch the `share_link` GA event and `link_shared_at` column — the share rate of new caterers is the loop's ignition metric. Nudge non-sharers in the day-7 trial email (already automated).
- **Powered-by footers are UTM-tagged.** Check `signup_source` on new accounts weekly — when "powered-by" appears organically, the loop is turning.
- **Referral offer** ("give a month, get a month") — build once billing is live; the attribution plumbing it needs already exists.

9.2 Community presence (2–3 hours/week, strictly value-first)

- Join the 5–8 most active UK caterer/home-food-business Facebook groups. First month: only answer questions, zero links. Reputation first.
- Approach 2–3 group admins directly: founding deals for their members, or a free "get your business online" live session. Make the admins founding members first.
- Same posture on UK small-business subreddits and TikTok catering-creator comments. Low volume, high sincerity.

9.3 Partnerships (pick 2–3, not 10)

PARTNER TYPE	WHY THEY'D CARE / MECHANICS
Food-hygiene training providers (Level 2 e-learning)	Every new caterer takes this course. Graduate perk: "3 months of Caterfy free" — value for them at zero cost, customers for you at the exact moment of business formation.
Commissary / rental kitchens	Your ICP concentrated in one building. Poster + tenant-perk deal per kitchen.
Caterer associations & street-food networks	Member-benefit listings. Start conversations month 2, expect month 4–6 payoff.
Wedding planners & venue coordinators	They constantly need caterer links to send couples — a planner sharing directory city pages is free customer-side demand.

Structure: partner gives distribution, Caterfy gives extended free months (cost $\approx$ £0), optional 20% revenue share for 12 months. No upfront payments to anyone.

Phase 4 (month 3+): small, disciplined paid tests

Preconditions before spending £1: deliverability fixed, activation and trial→paid rates known, at least one real testimonial live. (The cookie-consent requirement ad platforms impose is already met.)

10.1 Google Ads — exact-match, high-intent only (£100–200/month)

- Keywords (exact match): *catering website builder* · *website for catering business* · *catering order form* · *catering invoice template/software* · *take catering orders online* · *catering quote software*. Small UK volume is the point: near-zero competition, £0.50–£2 CPCs, searchers who want exactly this.
- Point "catering invoice" terms at the invoice-relevant guide; everything else at the homepage.
- Kill criteria in advance:** pause any keyword at £30 spend with zero signups; pause the channel at £300 total if blended CAC exceeds £30/trial.

10.2 Meta — one creative test (£5–10/day for 3–4 weeks)

- Audience: UK, catering/food-business/event-planning interests + small-business behaviours; later a lookalike of signups.
- Creative: 20-second screen recording — messy DM thread → the Caterfy order inbox → "£10/month, no commission". The real testimonial as a static image is variant #2.
- Expect Meta to fail the CAC bar and be fine with that; if it passes, scale gently.

10.3 What not to spend on

No paid directories/lead-gen, influencer retainers, trade-show stands, LinkedIn ads, display/awareness campaigns, or agency retainers — all fail the CAC maths at £10/month.

Metrics, targets & the weekly scorecard

11.1 The funnel, defined once

STAGE	DEFINITION	HEALTHY TARGET
Visit → Signup	Unique landing visitors → account created (GA <code>sign_up</code> event — live)	2–5%
Signup → Activated	Published site + menu + shared link (GA <code>publish_site</code> / <code>share_link</code> + <code>link_shared_at</code> — live)	50–60%
Trial → Paid	Subscribed by day 15 (GA <code>begin_subscribe</code> + Stripe)	15–25% (no-card trials)
Monthly churn	Cancelled ÷ active	< 5–7%
North star	Active caterers receiving ≥1 order/month (GA <code>place_order</code> — live)	Up and to the right

11.2 Instrumentation status

- GA4 events and UTM first-touch attribution are implemented; set the five events as conversions in GA4 once the property is live (needs consent-accepting visitors, so expect undercounting — treat Supabase as the source of truth).
- Every new account records `signup_source`; review it weekly — it's the single most decision-useful column in the database.
- Build the Monday SQL view when convenient: signups, activated, trials ending, paid, churned, orders — by week and by source.

11.3 The Monday scorecard (10 minutes, every week)

Signups (by source) · activation rate · trials ending in 7 days · trial→paid last cohort · churn · orders processed · Search Console impressions/clicks · one sentence: "what I'll change this week". If it takes more than 10 minutes to fill in, the instrumentation is the week's task.

Risks & mitigations

RISK	MITIGATION
Setup items in Section 03 get deferred and marketing starts anyway	Treat Section 03 as a hard gate. Promoting a product whose verification emails don't deliver converts interest into distrust — worse than not promoting.
Empty-directory cold start	Trialling caterers are now listed and empty states recruit caterers; founding programme concentrates density in 3–4 cities. The product also delivers standalone value with zero directory traffic.
Microbusiness churn	Trial sequence + monthly summary emails are live; soft-expiry keeps reactivation one click; consider a pause-instead-of-cancel option later.
£10 price can't support paid acquisition	Phases 1–3 are ~£0 CAC; paid is gated behind proven funnel maths with kill criteria.
Founder time (solo operator)	Each phase's assets persist (SEO, loops, listings); community capped at 2–3 h/week; content at 2/month.
Reputation in a tight community	Trust items are fixed (no fake proof, consent, support email, branded emails); white-glove the first cohort; answer support personally and fast.

Outreach message templates

INSTAGRAM DM — COLD, PERSONALISED (EDIT LINE 1 EVERY TIME)

Hi {name} — that {specific dish/grazing table from their feed} looked unreal. Quick one: I've built a tool for independent caterers that puts your menu, orders, quotes and payments on one page (so bookings stop living in your DMs). I'm inviting a small group of founding caterers to use it **free for 6 months** in exchange for honest feedback. Want me to set up a draft page for {business name} so you can see it with your own food on it? Takes me 20 minutes — no card, no catch.

FOLLOW-UP (3-4 DAYS LATER, ONCE, THEN STOP)

No worries if it's not for you! If it helps to see it first: here's a live example — {founding member link}. The offer's open for another couple of weeks while I fill the founding group.

FACEBOOK GROUP VALUE-POST (WHERE RULES ALLOW; NEVER LINK-FIRST)

For anyone taking bookings through DMs — three things that cut admin massively: (1) a fixed "what I need to quote" checklist (date, guests, location, dietary) pinned in your story highlights, (2) a bank-transfer template saved as a text shortcut, (3) blocking out dates you can't do *somewhere customers can see*. Happy to share more of what's worked — what's everyone's biggest time-sink: quoting, chasing payments, or the back-and-forth?

PARTNERSHIP EMAIL — HYGIENE TRAINING PROVIDER / COMMISSARY KITCHEN

Subject: A free perk for your {students/tenants}

Hi {name} — I run Caterfy, a £10/month website + order-management tool built specifically for independent caterers ({live example link}). I'd love to offer your {course graduates/kitchen members} 3 months free as a perk — costs you nothing, gives them a professional site with ordering, quotes and invoicing at exactly the moment they're setting up. Happy to set up a partner link so you can see uptake, and open to a revenue share if you'd like one. Worth a 15-minute call?

TESTIMONIAL ASK — FOUNDING MEMBER, AFTER THEIR FIRST ORDER

Saw your first order came through — brilliant! 🎉 Could I ask a small favour? One or two honest sentences about what Caterfy has changed for you, with your business name — it'll go on the homepage and I'll link your site (free traffic for you). Totally fine to say no.
